Font installation

3

Windows 7 and up

Right-click the .otf files and select **Install**.

(The fonts will be copied to Control Panel > Fonts.)

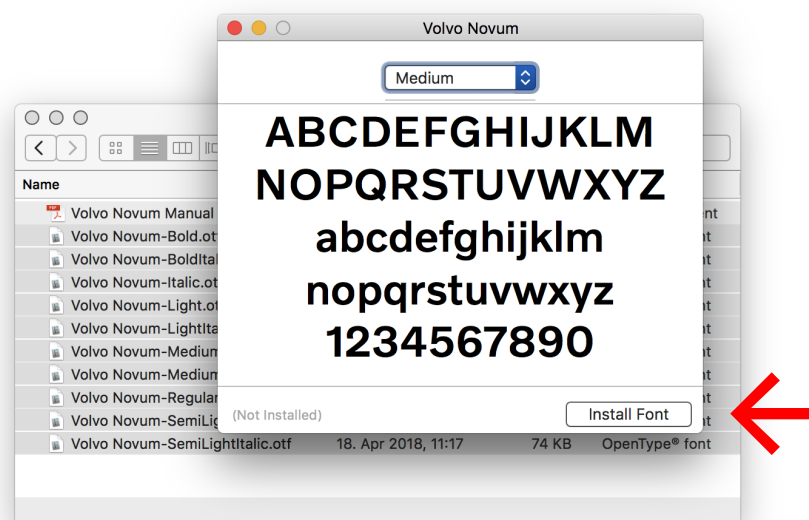

macOS

Control-click the .otf files and select **Open** (or type command-O)

Click the **Install Font** button, this will install all previously selected fonts.

(Installed fonts can be managed with the FontBook application.)

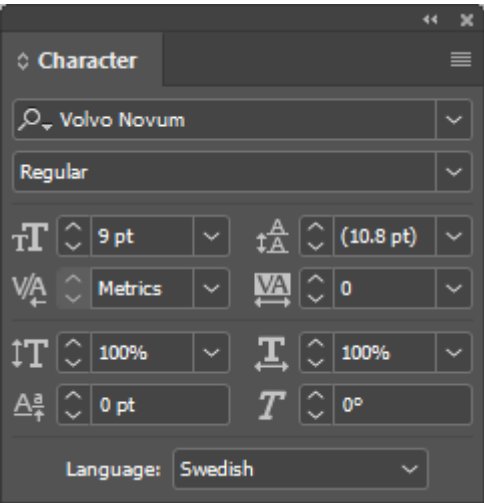

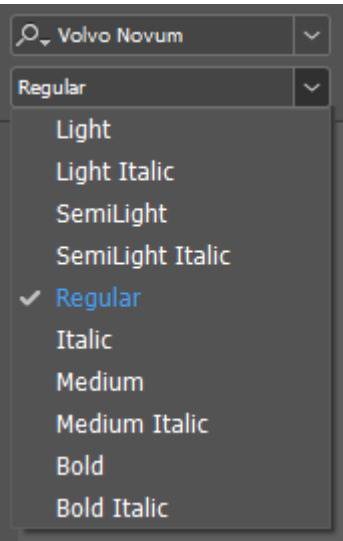

If you are using third party software to manage fonts, refer to the manual of that software.

Fonts and family

In layout applications like Adobe InDesign, all weights appear in the font menu, sorted properly by weight.

In order to get the intended spacing, set the kerning to “Metrics”.

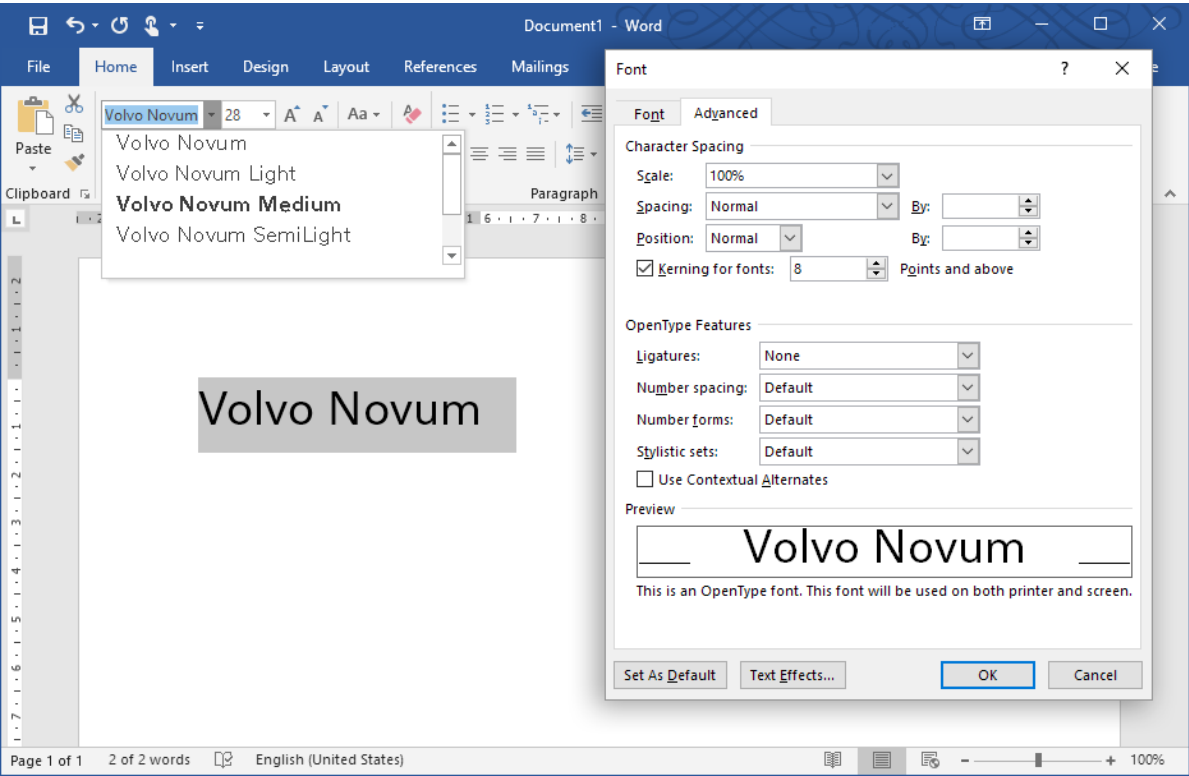

In office applications like PowerPoint and MS Word, only four fonts appear in the menu. The remaining fonts can be accessed by using the [B] and an [I] buttons for Bold and Italic, or by using the shortcuts ctrl-B and ctrl-I.

Font menu choice	+ Italic	+ Bold	+ Italic + Bold
Volvo Novum	<i>Volvo Novum Italic</i>	Volvo Novum Bold	<i>Volvo Novum Bold Italic</i>
Volvo Novum Light	<i>Volvo Novum Light Italic</i>		
Volvo Novum Medium	<i>Volvo Novum Medium Italic</i>		
Volvo Novum SemiLight	<i>Volvo Novum SemiLight Italic</i>		

The order of the fonts in the office menu is alphabetical.

In order to get the intended spacing, kerning must be switched on in the MS Word Font dialog.

Volvo Novum is delivered in different formats and language subsets.
The choice of format depends on the environment the fonts will mainly be used in.

- If you mainly use **layout and design applications** like Adobe InDesign or Illustrator:
Install the fonts in OpenType CFF format (file name ends with .otf).
- If you intend to use the fonts in **office applications** like Microsoft Word or PowerPoint:
Install the fonts in OpenType TTF format (file name ends with .ttf).
- If the fonts will be embedded in a **website**, use the formats WOFF2 and WOFF. If support for Internet Explorer versions 8 and older is required, use the additional EOT files as well.
- If the fonts will be embedded in a **mobile app**, use the OpenType TTF fonts.

OpenType TTF is the most widely used format. Only fonts in TTF format can be embedded in Word and PowerPoint files, as well as exported from Word to PDF without using third-party software. Some specialised applications may support either OT-CFF or OT-TTF only.

To allow keeping the file size down when embedding fonts in a website, the web font formats are available as multiple subsets with different language support levels.

Font family name	Basic Latin	Latin Extended	Cyrillic	Greek
Volvo Novum	■	■	■	■
Volvo Novum Latin	■	■	□	□
Volvo Novum Cy	■	□	■	□
Volvo Novum Gr	■	□	□	■

The Cyrillic and Greek subsets contain a basic Latin character set (A–Z, a–z) to be able to type-set common English words and car model names in Cyrillic or Greek text without the need to include an additional font.

Russian Мы начали производить автомобили в 1927 году, поскольку поняли, что никто не выпускает достаточно надежные и безопасные автомобили, подходящие для шведских дорог. На этом пути мы разработали десятки инноваций, часть из которых значительно изменила мир. Это поддерживает нас и заставляет двигаться от одной инновационной идеи к следующей.

Ukrainian Ми розпочали виробництво автомобілів у 1927 році, тому що ми вважали, що ніхто не робив їх досить потужними або достатньо безпечними для шведських доріг. За цей час ми впровадили десятки інновацій, деякі з яких змінили

світ. І саме ці прагнення ведуть нас вперед до наступної геніальної ідеї від Volvo Cars.

Belarusian Беларуская мова — нацыянальная мова беларусаў, уваходзіць у індаеўрапейскую моўную сям'ю, славянскую групу, усходнеславянскую падгрупу. Пашырана ў асноўным у Беларусі. Распаўсюджана таксама і ў іншых краінах, галоўным чынам у Польшчы, Украіне і Расіі. Алфавіт літаратурнай мовы створаны на аснове кірыліцы.

Bulgarian Започнахме да произвеждаме автомобили през 1927 г., защото вярвахме, че никога друг не ги прави гостатъчно

безопасни за шведските пътища. По пътя измислихме десетки иновации, някои от които са променили света. И именно тази всеотдайност ни движи напред към следващата голяма идея на Volvo Cars.

Serbian Српски језик је један од словенских језика из породице индоевропских језика. Српски као стандардни језик се 1991. године поново издвојио из српскохрватског језичког стандарда и наставио да се развија самостално. Српска језичка норма је дефинисана пре стварања српскохрватског стандарда.

Greek Αρχίσαμε να κατασκευάζουμε αυτοκίνητα το 1927 διότι πιστεύαμε ότι κανείς άλλος δεν τα κατασκεύαζε αρκετά ανθεκτικά ή αρκετά ασφαλή για τους σουηδικούς δρόμους. Στην πορεία, έχουμε επινοήσει δεκάδες καινοτομίες, ορισμένες εκ των οποίων έχουν αλλάξει τον κόσμο. Και είναι αυτή η δέσμευση που μας οδηγεί εμπρός, προς την επόμενη σπουδαία ιδέα της Volvo Cars.

Drive-E-motorer

Vi ville ha höga prestanda till XC90, men samtidigt riktigt låga utsläpp. Då kunde vi inte göra som alla andra. Vi utvecklade istället själva en motorfamilj med kompakta fyrcylindriga motorer som vi bygger i Skövde. I T8 dessutom kompletterat av en elmotor och laddningsbara batterier. Vilket alternativ du än väljer får du all prestanda du behöver och en bränsleförbrukning som är behagligt låg.
